

# Mabat Online™

Fleet Management & Tracking Software

Using GPS technology helps you to locate practically anything, anytime, anywhere on earth. This technology has proven to be an indispensable tool in supplying chain management and logistics, helping in continuously tracking the location of vehicles moving across the length and breadth of the country.

Ideally, every vehicle should be fitted with a tracking device for on-board diagnostics, as the device immediately indicates if any fault is likely to occur or has already occurred during the journey. The savings, in terms of money spent on repair bills, transportation delays, depreciation of the machinery and human welfare, can only be imagined.

Mabat Online™ is an integrated telematics product, used to manage fleets, which includes sophisticated on-board software and hardware technology, for real-time retrieval and harvesting of critical vehicle information and metrics associated with vehicle/driver performance. This allows customers to manage their fleets with a high degree of efficiency and cost effectiveness. This technology addresses the needs of businesses highly focused on seeking cost reductions and operational efficiencies to maintain and improve operating profits.

Mabat Online™ provides a real time tracking of your vehicle. It ensures the key vehicle data

using GSM/GPRS real time alerts 24/7. This data helps to pinpoint problems and identify solutions, such as the number of stops, starting and stopping times, mileage, speed, idle times, routes covered, geo-fencing, fuel consumption, engine temperature, unauthorized use and security issues. Due to efficient routes, it increases efficiency and enforces safer driving. Thus, in turn, it will contribute significantly to your company's goodwill and reputation. Research shows that the installation of robust fleet management devices reduces the running and maintenance costs of a transport fleet, by as much as 25%!

Proactive management of fleet vehicles leads to improved employee efficiency, asset utilization and enhanced customer service. Mabat Online™ provides a robust set of features including the ability to manage by way of exception through a sophisticated user defined alert system. In addition, Mabat Online™ integrates with Spetrotec's products, provides customers with a comprehensive view of real-time activity of their mobile assets, throughout the workday. This ensures a high degree of management control over fleet operations, with an annual return on investment, realized through significant cost reductions across a fleet and revenue generation opportunities that are impossible without automated real-time information flow from the field.
